The University of Texas Recruitment team
engineering scientist associate position

September 20, 2017

Dear Sir or Madam,

I am extremely interested in the position of engineering scientist associate with The University of Texas.

I would treasure the opportunity to work as a engineering scientist associate. As a developer at IBM, I learned how to work under an agile paradigm with weekly "SCRUMS", that helped manage ever changing requirements for software projects. I worked on an app called Watson Workspace, contributing largely to the notifications and paging system upon opening the mobile application. I also learned how to use the new iOS programming language, Swift, while on the job and with no loss of efficiency.

I have experience as an entrepreneur running my own website. I learned how to use test driven development with Ruby on Rails with Postgres. Writing all the software on my end taught me how to manage code and the importance of testing.

Thank you for the opportunity, I would love to work at the University of Austin, a great place with excellent people to work with.

The programming and planning perspective required for a engineering scientist associate position align with my abilities and experiences. I am enthusiastic about expanding my knowledge of programming, and embarking on new challenges. In addition, I believe I have a lot to offer The University of Texas in terms of programming expertise and I am excited about the prospect of working for you.

Thank you for your consideration. I look forward to meeting you to discuss how I can support the mission of The University of Texas.

Sincerely,

Alex 'A.J' Norton
